

Inventory Management System

Project Overview

This Inventory Management System is a web-based application designed to help businesses efficiently track, manage, and update their product inventory in real-time. It allows users to add new items, update stock levels, monitor sales, and generate reports, ensuring accurate and streamlined inventory control. This system ensures secure access management while maintaining smooth collaboration. The goal is to minimize human error, save time, and provide businesses with reliable insights for better decision-making.

Features list

- User can create a user account and login to system.
- User can add ,view ,update and delete inventory items.
- User can view analytical details such as catogeries,counts.
- User can generate a report of inventory details.

Technologies

- Tech stack-MERN(Mongo DB ,Express Js ,React JS ,Node js)
- Frontend (React): Create a responsive UI using React (Tailwind CSS).
- Backend (Node.js + Express): Build REST API endpoints
- Database (MongoDB)
- Git hub-version controlling
- Postman-Validate Backend endpoints
- Figma- Mockflow
- Visual code- Development Environment (IDE)
